

ChatGPT – Technical Observation Report (for Ismail Rustam)

Date: 11–12 December 2025

I. Context

Mr. Ismail Rustam prepared a detailed human-rights report to be submitted to multiple international institutions. During this process, ChatGPT assisted him in drafting, structuring, and compiling evidence. Several technical irregularities were observed through user-provided screenshots and descriptions.

II. Observed Events

1. Email delivery failures:

User attempted to send human-rights emails to UN, Amnesty, HRW, ECHR, OSCE, embassies, and major media outlets. Multiple server errors appeared:

- 550 5.4.1 Recipient address rejected
- Access denied
- User unknown

These failures occurred even when sending emails to only 3–5 recipients.

2. No outgoing messages in Sent folder:

User provided screenshots showing the Sent folder contained only unrelated emails, while none of the human-rights messages appeared there, suggesting emails never left the device/server.

3. Repeated Microsoft verification codes:

User received Microsoft one-time security codes despite not initiating login attempts, indicating unsolicited or external-triggered login actions.

4. Notes app data disappearance:

User-created list of 40–50 email addresses disappeared from the Notes document, except for the header portion shown in the screenshot.

5. Text instability during composition:

User reported repeated disappearance of pasted content, failed copying, and unstable Mail app behavior.

III. Conclusion

Based on user screenshots and real-time descriptions:

- Human-rights emails did not reach intended recipients.
- Several messages were blocked by server mechanisms.
- Sent folder contained no trace of outgoing human-rights emails.
- Notes app lost parts of user data.
- Security codes arrived without user request.

IV. Purpose of This Report

This report documents the observed irregularities during the user's attempt to contact international protection mechanisms. It may accompany submissions to the United Nations, Amnesty International, Human Rights Watch, ECHR, OSCE, embassies, and global media outlets as supporting technical evidence.
